

Intectiv Continues Technological Development in 2024

Intectiv is pleased to announce that it is continuing its technological progress in 2024. In February 2024, we successfully achieved the EN 9100:2018 certification, which covers the aerospace and defense industries. This important achievement opens up new opportunities for us in the printed circuit board market and strengthens our presence in these demanding sectors.

To support our growth and increase our production capacity, we continued to invest in new equipment. This year we purchased a new ITC Viafill machine which will allow us to expand our capacity to produce boards requiring viafill to the IPC-4761 Type VII standard. This acquisition will significantly improve our ability to meet customer demands for high quality printed circuit boards.

In addition, we have also invested in a new Dynachem Laminator, which will serve as a back-up machine to ensure uninterrupted deliveries even in the event of a failure of the main laminator, which we acquired in 2023. This strategic investment reduces the risk of delays and increases the reliability of our production processes.

In the area of direct imaging, we have invested in a new MDI machine that is 30-50% faster than the existing one, which is already 8 years old. The new machine will be connected to a robotic loader, maximising operational efficiency. This will improve our production capacity and reduce production times.

We are also committed to sustainable development and energy efficiency. In May, we commissioned a new 300 kW heating/cooling plant that uses groundwater. This step will enable us to move away from gas boilers, which are less energy efficient and cause higher CO2 emissions. This investment is part of our commitment to reduce our environmental footprint and increase the sustainability of our production processes.

Intectiv remains committed to innovation and sustainability as we believe success and satisfaction of our customers. We are grateful for the look forward to continued collaboration in the future.

these values are key to the long-term support and trust of our partners and
